

Hinkson Creek CAM Science Team
Notes of the January 21, 2014 meeting

Team Members Present: Bob Angelo, Paul Blanchard, Joe Engeln, John Holmes, Jason Hubbard, Robb Jacobson, Dave Michaelson, Dan Obrecht, Barry Poulton

The notes from the previous meeting were approved.

The team discussed potential future science projects to be proposed for funding. The discussion focused on proposals to analyze the flow and sediment data collected over the last five years by Jason Hubbard's group, a proposed study of fish and environmental factors relating to fish and a potential symposium to focus on public education and information about Hinkson Creek and the progress in understanding that is being made through the CAM process.

Each of the proposals had a short summary that was discussed and changes were suggested. Each proposal explains the work to be done, why the work is important to the Hinkson CAM process, the deliverable, major budget elements and a cost estimate that includes a "not to exceed" budget sum.
