

Sites	Reason	Rank
Twin Lakes lower lot	lower part of Hinkson; erosion; easy access	1
MU Rec Area / Reactor Field tree planting	easy access; riparian restoration; USGS stream gauge	1
Landfill stream stabilization	upper Hinkson; recent completion of both streambank stabilization and wetlands for landfill	1
El Chaparral	CAM project	optional afternoon
Rustic Road Stream stabilization	completed stream stabilization project with 1+ year of growth	optional afternoon
Level Spreader	CAM project	optional
Jay Dix	lower Hinkson	optional
Native Plant ROW Restoration S Providence	native plants in ROW; maintenance	optional
Sewer Project on Flat Branch (green corridor)	post project restoration	optional
Virginia Ave Housing Bioretention	BMP	optional
Hinkson at Seven Oaks	stream stabilization potential; difficult access	optional
Fire Station	BMP; stormwater education efforts	optional
optional afternoon	These are both good sites that are located near each other. Can either squeeze one of those in with the other 3 sites in the morning or do an optional afternoon activity to see both of these sites. Optional in the sense that folks may not intend to spend the whole day on a tour and that the priority should be the morning locations.	
optional	These sites are potential locations depending on what Stakeholders want to see. It is possible to work in one more site in the morning if Stakeholders are willing and interested. Action Team is open to any suggestions beyond those listed, there are a lot of potential locations.
