

Hinkson Creek CAM Science Team
Notes of the November 5, 2012 meeting

Team Members Present: Bob Angelo, Paul Blanchard, Joe Engeln, John Holmes, Jason Hubbard, Robb Jacobson, Dave Michaelson, Barry Poulton

The Team discussed the proposed GIS component of the habitat assessment with Ronny Lea of the Missouri Resource Assessment Partnership (MoRAP). MoRAP had discussed this work with other GIS groups on campus and it was decided that MoRAP had the best fit for the tasks required.

The team discussed the efforts of Jason Hubbard to seek funding for the field component of the habitat assessment work. Jason has nearly finalized the plans. He requested a letter of support from the science team and it was agreed that Joe would write a letter on the team's behalf, if no issues arose from EPA given Bob's participation on the team.

The team then discussed the conceptual model and its application to the proposed project at the Hinkson Nature Area. Robb pointed out the multiple ways that this project and others could impact the species and the team started a discussion of the importance of the various pathways. All agreed that more discussion was need on the model and its applicability to this and future projects.
